IMMERSE YOURSELF...

In emotionally intelligent environments

Comfort Health Solutions specializes in the creation of unique, thoughtfully inspired spaces within the healthcare setting, environments that heal, comfort, and emotionally connect.

These immersive experiences redefine what healthcare feels like by reducing stress and anxiety, fostering trust, and elevating the perception of care for patients and their families. They support a healing process that nourishes the mind, body, and spirit, without asking patients to choose between high-touch and high-tech.

Our nine-time award-winning team collaborates with your staff from concept to completion, delivering fully integrated designs that align with your workflow, goals, and budget. Whether you're enhancing an existing suite or designing a new facility, CHS environments become a quiet but powerful extension of care.

Our offering include:

- Interactive Projection Systems
- Ambient Lighting
- Wall Coverings & Murals
- Gantry Skins
- Mobile MRI-Compatible Monitors
- Virtual Windows & Ceiling Skylights
- Product Subscriptions

Comfort Health Solutions has extensive experience in every aspect of environmental design and theming. We merge art, innovative technology, and imaginative design to help you change the way your patients experience healthcare.

IMMERSE YOUR FACILITY...

In improved patient satisfaction

Patient experience has never been more important.

With HCAHPS scores now tied to reimbursement, how patients perceive their care environment is being evaluated more critically than ever. Creating spaces that feel welcoming, calming, and intentional can have a measurable impact on both patient outcomes and facility performance.

A well-designed environment can:

- Improve patient satisfaction
- Reduce the need for sedation
- Minimize appointment cancellations
- Support staff efficiency and retention

Great design also gives your facility a distinct advantage in the local market—strengthening your reputation, increasing patient referrals, and growing market share.

Comfort Health Solutions offers fully customizable environments for adult, pediatric, and women's health imaging that go beyond aesthetics; they're built to transform the experience of care.

EQUIPMENT SKINS

Our themed, hospital-grade vinyl coverings are custom-designed and applied to the gantry or table of various imaging equipment (CT, MRI, PET, Nuclear Medicine, R/F, DR, etc.). These designs turn cold, intimidating machinery into engaging and calming focal points, helping reduce patient anxiety and promote cooperation during scans.

For areas more prone to wear and tear, our **Diamond Shield** is a durable, clear protective layer that provides extra longevity without compromising the design.

These enhancements aren't just visual; they support smoother imaging experiences, improve patient flow, and reinforce your facility's commitment to comfort and innovation.

"CHS went above and beyond our expectations and have transformed our areas into magical get-a-ways for both our patients and staff!"

— Traci Foster, Texas Children's Hospital – The Woodlands

All CHS products are durable, washable, and scrubbable, and can be cleaned with regular medical cleaning solutions. However, we do not recommend using straight bleach to clean any of your CHS products.

WALL COVERINGS

Transform your walls with hospital-grade vinyl coverings that turn sterile surfaces into immersive, healing experiences. Applied like self-adhesive wallpaper, each piece is designed to elevate the environment—bringing color, calm, and intentional design to every space.

Facilities can choose from our extensive design library or work with Comfort Health Solutions to create a **fully customized theme** aligned with your brand, department, or patient population.

From whimsical pediatric rooms to serene adult and women's health spaces, our wall coverings support a more welcoming care experience for patients, families, and staff.

All CHS products are durable, washable, and scrubbable, and can be cleaned with regular medical cleaning solutions. However, we do not recommend using straight bleach to clean any of your CHS products.

INTERACTIVE PROJECTION

Interactive projection transforms the patient experience by immersing them in a customized projection environment designed to calm, distract, and emotionally support. Through animations projected onto walls, ceilings, or floors, patients are surrounded by visual themes that shift their focus away from the hospital setting.

This flexible solution is ideal for targeted spaces within your facility and is customized to reflect your patient population and clinical needs.

Features Include:

- **Gantry-compatible animations** for CT, PET/CT, MRI, PET/MRI, Nuclear Medicine, and Linear Accelerators
- **Wall, ceiling, or floor projections** suitable for any imaging or care space
- **Customizable and patient-selectable software**, giving patients the option to choose their own immersive environment
- Visual options include **nature imagery, pediatric themes, seasonal/holiday visuals, educational animations**, and more
- Can be installed as part of **new construction or retrofitted to existing equipment**
- **No-contact design** ensures nothing touches the equipment gantry, preserving ease of service and maintenance

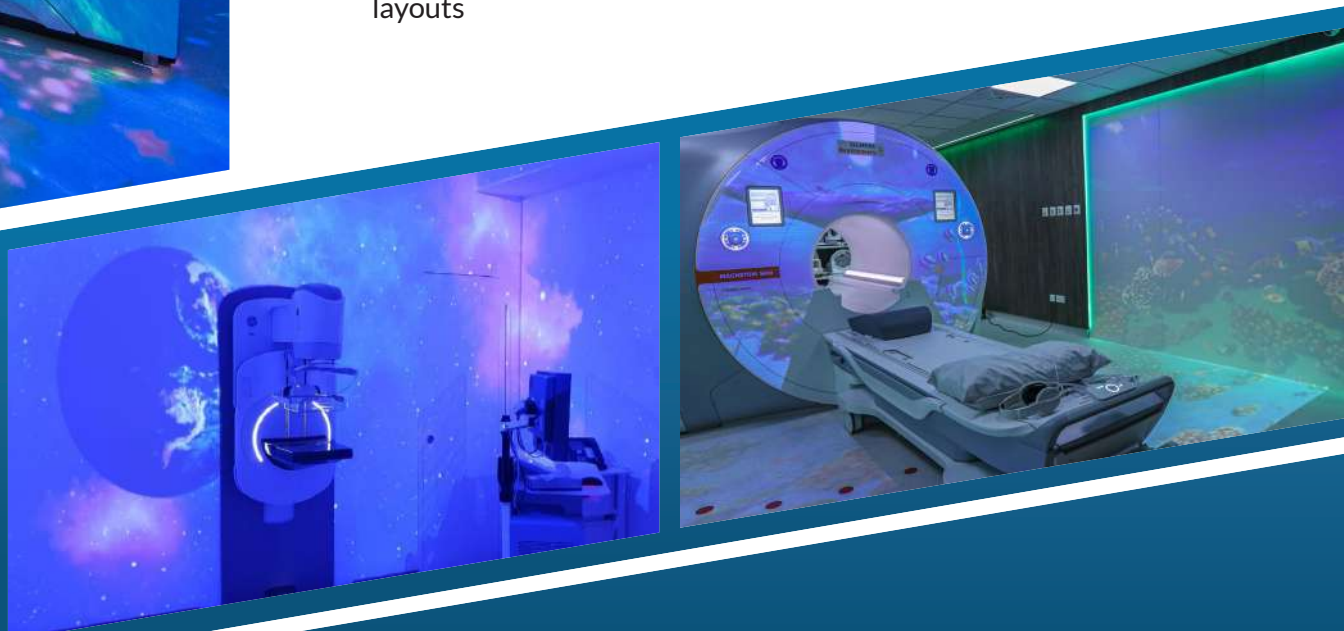

360 PROJECTION

360 projection displays brings your entire suite to life, delivering a level of immersion that transforms the entire care environment. Unlike standard projection setups, 360 displays uses expanded projection coverage to fully envelop the space in coordinated, calming visuals. The result is an environment that feels entirely different: emotionally engaging, mind-stimulating, and designed to transport the patient beyond the clinical setting.

Key Benefits:

- Surrounds patients with 360° animated visuals
- Reduces perception of equipment and clinical surroundings
- Promotes relaxation, focus, and cooperation during procedures
- Supports both pediatric and adult environments
- Seamlessly integrates with existing workflows and room layouts

AMBIENT LIGHTING

Our full-suite ambient lighting solution provides a calming wash of color throughout the room. As a popular enhancement for both patients and staff, ambient lighting helps create a peaceful, calming environment during what is often a stressful time in a patient's life.

Our serene panels offer rich, ambient illumination and are highly adaptable for spaces with architectural constraints. Each panel is custom-designed to fit ceiling or wall dimensions and can be controlled individually or globally through a wireless interface.

These panels can function as **standalone lighting features** or be integrated with **imagery** to become living artwork within the suite. Whether used to soften clinical lighting or to complement immersive design themes, ambient lighting adds a subtle but powerful layer of comfort and control to your care environment.

MOBILE MONITOR

A mobile monitor display enhances the patient experience by giving both patients and staff control over the environment through real-time media and ambient lighting. Whether mounted to the wall or mobilized on a stand, our mobile monitors brings the room to life, creating a calming, personalized experience that reduces anxiety and supports emotional wellness.

Features Include:

- **Real-time content and ambient lighting control** via tablet
- **Stream music**, display scenic visuals, or play personalized videos
- **Mount horizontally or vertically**, or use with a **mobile MRI-compatible stand**
- **Designed for ramped environments** where fixed mounting isn't feasible
- Supports playback from **Netflix, YouTube, Disney+** and others

Whether enhancing a waiting room, procedure suite, or recovery bay, mobile monitors offers a versatile, patient-focused solution for immersive media and calming design.

CEILING SKYLIGHTS AND VIRTUAL WINDOWS

Our LED Ceiling Skylights and Virtual Windows are **MRI compatible** and can be installed on ceilings or walls to bring light, space, and comfort into your care environment.

Choose from square, rectangular, or round shapes with sizes ranging from **2'x2' tiles** to full-suite installations. These calming visuals simulate daylight or outdoor views—ideal for areas with limited natural light or where patients are feeling enclosed.

Your patients will love the relaxing atmosphere these features create, and their **durable LED panels** ensure a long-lasting, low-maintenance solution that doubles as functional artwork.

Highlights:

- MRI-safe LED construction
- Ceiling-mounted or wall-integrated
- Custom shapes and scalable configurations
- Helps reduce anxiety in enclosed or high-stress areas
- Energy-efficient, long-life LED technology

MRI FINISHES

Functional Comfort Meets Seamless Design

The functionality of medical imaging is directly tied to exam speed, and a relaxed environment helps patients remain still, which can reduce scan time and improve results. Balancing clinical performance with calming design is complex, but CHS makes it possible.

CHS has collaborated with Simon Hegele and shielding manufacturer Tekemi to design integrated furniture elements that blend directly into MRI room walls, maintaining both aesthetics and clinical performance. These features help create environments that feel open and uncluttered, while still supporting technical needs.

Our MRI finishes include **aesthetic furniture components** that align with your existing decor and design goals. These solutions can be incorporated into any medical imaging project, whether you're building a new MRI suite or **retrofitting an existing room**.

With CHS, functionality and visual comfort are no longer competing priorities; they work together.
